

evohome WiFi multi-zone system

evohome is a sophisticated heating system that ensures you can create and individually control up to 12 heating zones in domestic properties. **evohome** will also control domestic hot water.

evohome is suitable for any home with a hydronic (wet) central heating system. Zoning solutions can be designed for even the simplest of property layouts. **evohome** is ideal when looking to control temperatures in larger properties such as: luxury apartments; large family homes; homes with business use; multiple occupancy apartments and light commercial spaces such as doctors surgeries and small offices.

evohome allows the installation of multiple temperature sensing devices around the property without altering existing pipework, disrupting décor or damaging fixtures and fittings.

With touchscreen control, the user can quickly gain control of exactly where and when the property should be heated.

Remote access is provided via a tablet or smart phone.

Wireless Radiator Controllers provide an easy way of installing heating zones without draining down or disturbing pipes or décor.

evohome really is the brain of the heating system.

evohome WiFi controller

The multi-zone evohome controller controls the time and temperature of up to 12 heating zones plus a domestic hot water supply if required. Each zone has independent time and temperature control.

It has a backlit colour LCD screen. The unit can either be wall mounted with an external power supply or table mounted on the table stand. This is powered by a DC power supply plug. The evohome controller can be removed from the stand for easy programming for up to 2 hours before returning to the stand for charging.

The colour of the surround can be changed to either grey; graphite and black (using the accessory pack). A choice of idle screens, analogue or digital clock displays and a choice of day or night mode increases the aesthetic properties of the most visible part of the evohome system. When controlling the heating system the evohome controller has a number of features that make operation easy.

The evolome controller can act as a room thermostat on its own. Zone names can be input to match the actual property and the zones can be controlled as multi-room or as single-room zones. Zones can be configured to give individual local override of a room or rooms within the zone.

The programming in the unit is split between in-use and installation sections with a wide variety of control choices for the property owner. There is a guided scheduling wizard for the property owner to help them set up time and temperature profiles in each zone and a guided configuration facility for installers.

The screen will show energy efficiency messages to the homeowner as each zone's temperature will be colour coded to show potential over or under set point temperatures.

There are a number of quick actions available to make it easy to change the heating requirements for a short period.

- Day Off mode changes the schedule for all the zones to a pre-set day (i.e. change a week day to a weekend day)
- The Heating Off button will turn all the zones off unless the frost protection temperature level is reached

Inbuilt optimisation features allow the system to work more efficiently:

- 'Delayed Start' and 'Optimum Stop' allow evohome to intelligently optimise start and stop times
- A learning TPI algorithm ensures each zone adapts to the weather and the seasons

The **evohome** controller provides access for the installer to fully control the heating system. It is suitable for radiators, hydronic under floor and a mixture of both types of heating. Cycle rates, minimum on times and fail safe parameters can be set.

OpenTherm® capability is built-in to work with OpenTherm® boilers. Boilers can be controlled by either a boiler relay or an OpenTherm® bridge. This OpenTherm® Symbol functionality is suitable for BOTH heating and hot water. You can programme a temperature offset for the evohome controller screen when used as a temperature sensor in its own right.

Hot water cylinder overrun and temperature offset levels can be programmed as can the hot water temperature itself. You can carry out a wireless Radio Frequency (RF) check using the evohome controller screen. Wireless binding of the system components is carried out via the touchscreen and additional sensors can be easily bound in post application if the zoning requirements change.

Your evohome connects to the internet via built-in WiFi and will appear as a device on the home network - once it is on your network and you have registered your device with the Total Connect Comfort (TCC) website (full details in the user guide), the evohome controller is able to display external temperatures.

evohome WiFi controls

Thermostat

Digital room thermostats

Where there is a requirement to use a wireless room thermostat as a temperature sensor, both Honeywell's DT92 Digital Room Thermostat and the Y87 Single Zone Room Thermostat can be included into the evohome system.

Y87 Digital Room Thermostat

Easy to set up with two way wireless communication (30m range) and a signal strength indicator. Simple to operate with up and down buttons (DT92) or by a turn of the Dial (Y87). Individual zone temperature override.

5 to 35°C set point range offers a wide range of comfort levels. The DT92 digital thermostat can be wall mounted or free standing to ensure best possible positioning. Y87 Single zone thermostat is wall mounted.

Wireless cylinder thermostat

Control domestic hot water via the evohome controller screen by installing an externallymounted wireless cylinder thermostat onto the hot water cylinder; Sensors are provided for vented and unvented cylinders.

Honeywell's externally-mounted wireless cylinder thermostat is a combination of a temperature sensor that is mounted against the metal of the hot water cylinder and a wireless battery powered transceiver that communicates the water temperature to the evotouch controller.

Wireless relay

The remote relay is wired into either a motorised zone valve or the boiler and provides the wireless interface between these devices and the evohome system. The relay box requires a permanent 230V~ supply.

OpenTherm® Bridge

Allows the boiler to be modulated via this bridge between OpenTherm® capabilities built into the evohome controller and the OpenTherm® capable boiler. Only required when controlling an OpenTherm® capable boiler.

Turning evolome into a connected device

Once the **evohome** WiFi system is installed register the system on the Total Connect code provided and receive instructions on how to download the smartphone or tablet app that

evohome WiFi technical data

Technical Data – evohome Controller	
Electrical	
Input voltage	230VAC ± 10%
Battery type (supplied)	Rechargeable Type AA 1.2V NiMH 2000-2400mAh
RF Communication	
RF operation band	ISM (868.0 – 870.0) MHz, RX class 2 1% Duty Cycle
RF communication range	30m in a residential building environment
Environmental and Standards	
Operating temperature	O to 40°C
Storage temperature	-20 to +50°C
Humidity	10 to 90% relative humidity non condensing
IP Protection Class	IP30
Mechanical	
Dimensions	(WxHxD): 139 x 101 x 21mm

Technical Data - Radiator Controllers	
Electrical – Power module	
Power Supply	(Battery) 2 x AA alkaline batteries
Temperature Setting Range	5°C − 30°C
Humidity	10 to 90% relative humidity non condensing
RF Communication	
RF operation band	ISM (868.0 – 870.0) MHz, RX class 2 1% Duty Cycle
RF communication range	30m in a residential building environment
Environmental and Standards	
Operating temperature	0 to 50°C
IP Protection Class	IP30
Standards	CE marked
Mechanical	The radiator controller fits on the most common radiator valves of the type M30x1.5. Other adaptors are available

For full technical details please refer to the installation instructions.

Technical Data - Wireless Cylinder Thermostat		
Electrical		
Power supply	Two AA size, 1.5V alkaline batteries	
Temperature Setting Range	SPD30°C to 85°C	
Cable Length	1.5m between cylinder thermostat and transceiver	
RF Communication

Standards	IDIN ENISO9001/14001, CE, EN60730-1 (2001), EN55014-2(1996), ETSIEN300220-3(2000)	
IP Protection Class	IP30	
Mechanical		
Dimensions	(WxHxD): 92 x 90 x 31.6mm	

Technical Data - D192E 8	\$ Y87
Electrical	
Power supply	2 x 1.5V IEC LR6 (AA) Alkaline cells (supplied)
Temperature setting range	5°C to 35°C setpoint range in 0.5°C increments
RF Communication	
Operation band	ISM (868.0-868.6) MHz, 1% duty cycle
Communication Range	30m in a residential building environment
Environmental and Standards	
Operating temperature	0 to 40°C
IP Protection Class	IP30
Standards	CE marked. WEEE & RoHS compliant
Thermostat	90 x 92 x 27mm (DT92) 820mm diameter (Y87)
Weight	154g (thermostat with batteries)

evohome controls

evohome consists of a number of quality components manufactured by the UK's leading manufacturer of home heating controls.

Radiator controllers

The radiator controllers use two-way communication with the evolome controller to ensure that commands are received and valves opened while maintaining boiler interlock.

Under floor heating controller

By controlling the hydronic under floor heating via the Honeywell under floor heating controller, the time and temperature of the under floor heating can be achieved via the evohome controller screen.

The under floor heating controller provides for up to 5 zones of under floor heating and the optional extension controls a further 3 zones. It operates on the same 868 MHz frequency as the rest of the evohome components and has an internal antenna.

Attractively designed

These slim, ergonomically-designed radiator controllers will fit on most standard TRV bodies. They are battery powered with a two-year battery life and a battery low reminder visible on both the radiator controller screen and the evolome controller screen. The flip-up screen is backlit and can be positioned so that it can be easily viewed or folded away flat.

Full of features

The backlit LCD screen displays the zone name, and local set point temperature. The local set point temperature can easily be overridden by turning the dial at the top of the radiator controller. Override temperatures can be set in half degree increments and are effective until the next scheduled temperature change. There is an open window feature that recognises sudden temperature drop and shuts off the local radiator.

The zone temperature changes made at either the evohome controller's screen or via the remote app will change in real time on the screen on the radiator controller.

Simple to install

Radiator controllers provide the optimum solution for installers when considering installing heating zones as there are no additional zone valves required which makes installation a lot quicker and cleaner. With existing TRV bodies already in place there is no need to drain down the system and they will fit on most compact radiators.

They are easily bound into the system using the guided configuration feature in the evohome controller; binding confirmation is displayed on the screen. Controllers are available either individually or as a pack of 4.

Accessories

You can also buy additional screen covers that allow the screen surround to be either grey anthracite or black. A replacement evohome controller table stand and a wall mounting kit are also available. Individual evohome WiFi screens without a power cable and table stand are available as spares.

If you wish to replace existing TRV bodies, a Honeywell valve kit (VHL120) is available.

Visit www.honeywelluk.com/products/Thermostats/Thermostatic-Radiator-Valves/ for more information

how you can buy evohome

evohome is available from any good supplier of plumbing and heating products. It comes in a number of different packs dependent on what sort of job you need to do.

The evohome Pack consists of an evohome controller, power lead and stand plus a wireless relay box.

The evohome Radiator Multi Zone Kit provides 4 wireless radiator controller heads allowing you to create up to 5 zones – one head per zone plus the **evohome** controller as a temperature-sensing device in a zone. Individual radiator controllers are also available.

The evohome Hot Water Kit consisting of a wireless cylinder thermostat, transceiver, optional unvented cylinder insertion sensor and an additional wireless relay box for control of the hot water zone valve.

- Wireless room thermostats are also available
- Wireless under floor heating controls and an extension module are available
- OpenTherm® control capability is possible by installing the evohome OpenTherm® Bridge
- Single additional radiator controllers are available as are additional wireless relay boxes
- Replacement evohome controllers can be purchased
- Extra covers, a replacement table mount and a wall mounting kit are also available

From this list of options you can see that you can build up a sophisticated zoning control system that will suit most properties.
